## **DETAILED ACTION**

### ***Applicant's Response***

1. Applicant submitted, 7/8/02, arguments to the current rejection. In light of the arguments, the examiner has provided a new grounds for rejection as part of a non-final office action.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swinamer et al. in view of Walker et al.

Swinamer et al. shows all of the limitations of the claims except for specifying the use of a wireless management device/PDA including displaying information and sending information to and from the PDA and the POS via a central controller also using wireless modems.

Swinamer et al. shows, figure 1, a hardwired method of communicating (sending) request for management decisions (override details), including price information, credit clearance (monetary pick-up, approval), security alerts (lock up of POS) and other incidents requiring the manager's attention. This is done for a plurality of POS terminals. The manager is at the master

station (central controller system) and can determine through verbal communication the satisfactoriness or unsatisfactoriness level of the POS terminal and has the ability to fix problems to ensure satisfactoriness.

Walker et al. teaches, figure 1, a system and method for dynamic assembly of packages in retail environments. System 100 includes a server 102 which is connected through a network 104 (LAN) to a plurality of point-of-sale terminals (column 4, lines 42-44) in order to improve information flow to better serve customers. The use of a PDA is one examples given as an output device for both the server and the POS terminals.

Based on the teaching of Walker et al., it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the Swinamer system to incorporate the LAN and PDA system of Walker et al. in order to improve information flow to better serve customers.

#### ***Response to Arguments***

4. Applicant's arguments with respect to claims 1-24 have been considered but are moot in view of the new ground(s) of rejection.
